

Cybersecurity engineering, mission assurance, and evidence-governed operations from assessment through implementation and independently verified outcomes. enLight10 helps government, defense-industry, regulated, and commercial teams identify risk, organize evidence, strengthen operations, and integrate Watchtower™ without replacing existing tools.

Core Capability Areas

Cybersecurity Engineering & Compliance - Security posture, maturity, and gap assessments - NIST CSF, NIST 800-53/171, CMMC, SOC 2, and Zero Trust readiness - Policy, incident response, evidence, risk, and remediation engineering - Security architecture and implementation roadmaps	Watchtower™ Platform & Integration - Evidence-governed mission assurance and security operations - Canonical operational context, entity/dependency mapping, and provenance - Collaborative investigations, governed response, and independent verification - Watchman™ AI, pilots, deployment, and tool/data integration
SOC, Detection & Mission Assurance - SOC/NSOC maturity, operating models, playbooks, and metrics - Sentinel, Splunk, Elastic/OpenSearch tuning and workflow design - Detection engineering, incident/vulnerability, and resilience workflows - Mission impact, executive visibility, and verified outcomes	Prime, Subcontract & R&D Support - Bounded cyber, compliance, engineering, and R&D work packages - Federal/DoD support, SBIR/STTR teaming, and prototypes - OT/ICS readiness with specialized testing partners - Surge, white-label, transition, and partner-delivered support

Assessment-to-Action Delivery Model

1. Intake Mission/business context, systems, drivers, evidence, goals	2. Assess Security posture, control gaps, exposure, maturity, constraints	3. Map Findings to controls, risk, dependencies, owners, evidence gaps	4. Prioritize Mission impact, high-risk fixes, roadmap, owners, outcomes	5. Improve & Verify Engineering, remediation, workflows, Watchtower™, verification

Differentiators & Primary Use Cases

Differentiators Practitioner-led: 15+ years across DoD, federal, SOC, incident response, architecture, compliance, and OT/ICS environments. Evidence to verified outcome: Preserves provenance and separates recommendation, approval, execution, verification, and closure. Product plus services: Watchtower™ is delivered with integration, engineering, advisory, and transition support. Prime-friendly: Bounded work packages, partner delivery, existing-tool integration, and no forced rip-and-replace.	Primary Use Cases - DoD/federal cybersecurity, mission assurance, and program support - DIB CMMC/NIST 800-171 readiness and evidence preparation - SOC maturity, detection engineering, incident/vulnerability response, and infrastructure resilience - Watchtower™ pilots, integrations, governed response, and AI-enabled workflow modernization - Prime-contractor cyber, compliance, prototype integration, and R&D support - OT/ICS and regulated-environment readiness
